🔗 Planner Consultant — Assess Brahma's brand performance in Brazil during Q1 2026 by determining whether it improved, declined, or remained stable, and identifying the main drivers behind that performance in brand health, perception, and audience response.

Success criteria: The investigation is complete when it can clearly state whether Brahma's performance in Brazil in Q1 2026 improved, declined, or stayed flat, summarize the main underlying perception and consumer-response drivers, and note any important segment-level differences or concentration of effects.

Hypotheses:

- [open] H1: Brahma's overall brand performance in Brazil improved in Q1 2026 versus the relevant prior period(s).
- [open] H2: Any change in Brahma's Q1 2026 performance was primarily driven by shifts in brand perceptions rather than by broad stability across all measures.
- [open] H3: Brahma's Q1 2026 performance in Brazil varied meaningfully across consumer segments, indicating uneven strength within the market.

Probe candidates:

- (high) P1: How did Brahma's overall brand health in Brazil change in Q1 2026 compared with the immediately preceding period and the same period last year? — Directly establishes the topline answer for H1 and anchors whether Q1 2026 was strong, weak, or stable.
- (high) P2: Which brand perceptions for Brahma in Brazil strengthened or weakened in Q1 2026, and which shifts best explain the overall performance change? — Tests H2 by identifying the main perception-level drivers behind the topline movement.
- (high) P3: How did consumer consideration, preference, and usage-related outcomes for Brahma in Brazil move in Q1 2026? — Determines whether performance changes were translating into consumer response, which is necessary to characterize performance comprehensively.
- (medium) P4: Did Brahma's Q1 2026 performance in Brazil differ across key demographic or audience segments? — Tests H3 and helps explain whether overall results masked pockets of strength or weakness.
- (medium) P5: Was Brahma's Q1 2026 performance in Brazil broad-based across brand measures, or concentrated in a small number of dimensions? — Helps distinguish between a genuine overall

performance shift and a narrow movement affecting only select aspects of the brand.

Open questions:

- What should be treated as the primary comparison baseline for 'perform in Q1 2026' if multiple baselines are available, such as the prior quarter versus the same quarter last year?
- Should the final assessment emphasize absolute brand standing in Q1 2026, period-over-period change, or both?

▼ 🧑‍💻 Decision Consultant — confidence 0.81

Remaining gaps:

- [closed] Overall Q1 2026 performance level for Brahma in Brazil is addressed at a topline level via power and supporting funnel/brand metrics.
- [partial] Quarter-over-quarter and year-over-year context for overall performance is only partially covered: power and consumption/trial have Q4 2025 and Q1 2025 comparisons, but most core equity KPIs are only compared vs Q1 2025, not Q4 2025.
- [partial] Drivers of performance are partially explained through meaningful/difference/salience shifts and imagery changes, but there is no explicit decomposition tying these drivers to the net power change.
- [partial] Consumer behavior outcome metrics are partially covered because trial and consumption are included, but consideration is missing despite being asked for in one probe.
- [partial] Subgroup/cohort performance is partially covered: extensive age/gender/income/region cuts exist for power and key equity metrics, but the dataset is incomplete in places with nulls and may be more detail than needed for a concise overall answer.
- [open] Competitive context versus other brands in Brazil in Q1 2026 is not addressed, so it is unclear whether Brahma underperformed the market or simply followed category trends.
- [open] Statistical significance / whether observed changes are materially meaningful beyond normal survey noise is not addressed.

New hypotheses:

- H1: Brahma's softer Q1 2026 performance was primarily driven by declining salience rather than weakening brand meaning or differentiation, since meaningful and difference improved while salience fell sharply.
- H2: The topline softness may be concentrated in certain regions such as Rio de Janeiro and São Paulo, which show notable declines in power and salience, partially offset by gains in Nordeste and Centro Oeste.
- H3: Performance weakness may be more about reduced recent consumption than brand predisposition, as trial stayed relatively stable while 7-day, 4-week, and 3-month consumption all declined.
- H4: Brahma may be strengthening on emotional/cultural fit and distinctiveness in some segments while losing everyday mental availability, indicated by gains in meaningful/difference but declines in salience and several social/fun imagery associations.

▼ 🔴 Decision Engine — continue (value=0.86, reason=continue)

This is the most decision-critical unresolved gap because the current evidence explains Brahma's internal shifts but cannot tell whether the decline is brand-specific or just category-wide. With only 3 total probes left in budget, competitive context would most improve the usefulness of the overall answer.

Recommended next gap: Competitive context versus other brands in Brazil in Q1 2026 is not addressed, so it is unclear whether Brahma underperformed the market or simply followed category trends.

🔗 Planner Consultant — Establish whether Brahma’s Q1 2026 performance in Brazil was weak, stable, or strong in relative market context, and close the most decision-relevant gaps needed for a concise performance readout.

✓ This round should prioritize understanding whether the observed topline softness was brand-specific or part of broader market movement.

Success criteria: The investigation is done when it can summarize Brahma’s Q1 2026 performance in Brazil with: topline direction, key supporting drivers and drags, consumer outcome context, and clear competitive context showing whether performance was brand-specific or market-wide.

Hypotheses:

- [supported] H1: Brahma’s Q1 2026 performance in Brazil softened versus prior periods, primarily because visibility and recent usage weakened despite some improvement in brand meaning and distinctiveness.
- [open] H2: Brahma’s apparent softness is at least partly market-wide rather than uniquely brand-specific, so relative standing versus competitors may have been stable.
- [open] H3: A clearer quarter-over-quarter read on core brand equity would show whether the Q1 2026 outcome reflects a recent deterioration or a longer-running year-over-year pattern.
- [open] H4: Missing consumer funnel evidence, especially around consideration, could materially change the interpretation of how healthy Brahma’s Q1 2026 demand pipeline was.

Probe candidates:

- (high) P1: How did Brahma’s overall brand performance in Brazil in Q1 2026 compare with key competitor brands in the same market and period? — Directly addresses H2 and the recommended next gap by showing whether Brahma underperformed the competitive set or moved with the market.
- (high) P2: Did Brahma gain or lose relative standing in Brazil in Q1 2026 versus Q1 2025 and Q4 2025 across overall brand strength, mental availability, and recent consumer engagement compared with competitors? — High-value follow-up to H2 because trend-based competitive context is more informative than a single-period snapshot.
- (medium) P3: How did Brahma’s core brand equity dimensions in Brazil change from Q4 2025 to Q1 2026? — Addresses H3 without duplicating prior year-over-year work and helps determine whether Q1 2026 was a recent step-down or continuation.
- (medium) P4: How did consumer consideration for Brahma in Brazil change across Q1 2026, Q4 2025, and Q1 2025? — Addresses H4 and closes a specifically identified missing funnel gap that could alter the overall interpretation of performance.

Open questions:

- Whether the observed changes are statistically meaningful versus normal survey variation may remain unresolved if no materiality test is available.
- A full causal decomposition from perception shifts to overall brand performance may remain only directional rather than definitive.

Decision Consultant — confidence 0.83

Remaining gaps:

- [closed] Overall Q1 2026 performance level for Brahma in Brazil is established: power was 12.9, down from 13.2 in both Q4 2025 and Q1 2025.
- [closed] Underlying brand-equity drivers are largely established: meaningful rose to 153.2, difference rose to 95.1, while salience fell to 202.4; affinity, meet need, unique, and dynamic were slightly down YoY.
- [closed] Consumer funnel/usage performance is substantially addressed: trial was 88.7, consumption fell across 7 days (27.5), 4 weeks (44.3), and 3 months (60.6), and first-choice

consideration dipped to 40.3 while non-consideration rose to 15.9.

- [partial] Relative competitive context is addressed for power, salience, and 4-week consumption: Brahma remained a top-tier brand but trailed Heineken on power in Q1 2026 and also saw weaker salience/usage trends than some competitors.
- [partial] Image/perception shifts are partially addressed through BIP market imagery, showing softness on 'Brazilian way', heritage, fun, sharing, and beer-enthusiast associations, with a few improvements on sophistication, in-vogue, care in brewing, and selected ingredients.
- [partial] Segment-level performance is partially addressed: cohort data suggests weakness is concentrated in some regions and demographics (notably RJ/SP/Sul and several younger/male/medium-income cuts), while Nordeste and some older cohorts were more resilient.
- [open] A concise synthesized diagnosis of the main reason Q1 2026 underperformed is not fully resolved because multiple factors moved in opposite directions and no direct causal evidence ties salience/image changes to usage declines.
- [open] Statistical reliability/significance of the observed changes is not provided, so it is unclear which movements are meaningful vs noise, especially in granular cohorts and imagery.

New hypotheses:

- H1: Brahma's Q1 2026 softness was primarily driven by declining salience rather than weakening core brand meaning or differentiation.
- H2: The national decline was disproportionately caused by regional weakness in Rio de Janeiro and São Paulo, which outweighed gains in Nordeste.
- H3: Usage erosion came from reduced frequency/recent consumption among existing consumers more than from a collapse in trial or broad consideration.
- H4: Erosion in social/cultural imagery associations (e.g., Brazilian way, sharing with friends, fun) contributed to lower salience and recent consumption.

Final Answer

Summary

Brahma in Brazil had a slightly weaker Q1 2026 overall. Its brand power fell to **12.9** from **13.2** in both Q4 2025 and Q1 2025. The pattern suggests that Brahma’s core brand equity was not collapsing—**meaningful** and **difference** both improved—but the brand lost **salience** and recent consumption, which appears to be the main performance drag.

Key Findings

- **Overall performance softened:** Brahma’s power declined to 12.9 in Q1 2026, down 0.3 pts vs both Q4 2025 and Q1 2025.
- **The biggest weakness was salience, not meaning or differentiation:**
 - **Meaningful** rose from 147.8 in Q1 2025 to 153.2 in Q1 2026, and from 151.1 in Q4 2025 to 153.2.
 - **Difference** rose from 93.2 in Q1 2025 to 95.1 in Q1 2026, and from 93.5 in Q4 2025.
 - But **salience** fell from 214.9 in Q1 2025 and 211.5 in Q4 2025 to 202.4 in Q1 2026.
- **Recent usage weakened across all measured windows:**
 - **Past 7 days:** 27.5 vs 29.8 in Q4 2025 and 30.4 in Q1 2025
 - **Past 4 weeks:** 44.3 vs 46.3 and 48.0
 - **Past 3 months:** 60.6 vs 61.5 and 62.7
- Trial remained relatively stable, so the issue looks more like usage/frequency erosion than acquisition collapse: trial was 88.7 in Q1 2026 vs 89.2 in Q4 2025 and 87.8 in Q1 2025.
- **Consideration was mixed, but first-choice intent weakened:**
 - **It would be my first choice:** 40.3 in Q1 2026 vs 42.1 in Q4 2025 and 41.7 in Q1 2025
 - **I would seriously consider it:** 24.1, slightly above 23.8 and 23.9
 - **I would not consider it:** 15.9, up from 14.5 and 14.0
- **Image signals show softness in some social/cultural associations:** the biggest declines vs Q1 2025 included “Brazilian way” (22.9 to 20.8), “You like to share with your friends” (4.9 to 3.7), “It’s a fun brand” (3.5 to 2.5), and “Is loved by beer enthusiasts” (2.4 to 0.7).
- **Competitive context:** Brahma remained one of the strongest brands in Brazil, but in Q1 2026 it trailed Heineken on power (12.9 vs 14.2), salience (202.4 vs 201.7 for Heineken is actually slightly higher for Brahma), and 4-week consumption (44.3 vs 49.7). Brahma was still ahead of Skol Pilsen on power (12.9 vs 9.3) and usage (44.3 vs 33.0).
- **Weakness was uneven across segments:** national softness was accompanied by notable power declines in Rio de Janeiro (20.0 to 17.9), São Paulo (9.3 to 8.2), and some younger/male cuts, while Nordeste improved (13.0 to 14.4).

Evidence

Brahma headline performance in Brazil

KPI	Q1 2025	Q4 2025	Q1 2026	Change vs Q1 2025	Change vs Q4 2025
Power	13.2	13.2	12.9	-0.3	-0.3

Corona Extra	4.8	102.0	24.3
Original	4.4	109.3	24.6
Antarctica Pilsen	4.2	113.9	22.1

Selected imagery shifts for Brahma, Q1 2025 to Q1 2026

Imagery	Q1 2025	Q1 2026	Delta
Brazilian way	22.9	20.8	-2.1
Is a brand with traditions and heritage	17.8	16.8	-1.0
You like to share with your friends	4.9	3.7	-1.3
It's a fun brand	3.5	2.5	-1.0
Is loved by beer enthusiasts	2.4	0.7	-1.7
Is in vogue	-2.0	-0.2	+1.8
Is sophisticated	-11.8	-9.7	+2.1
Is brewed with care	-6.5	-5.2	+1.2
It's produced with selected ingredients	-7.2	-5.7	+1.5

Selected regional power shifts

Region	Q1 2025	Q1 2026	Delta
Brazil total	13.2	12.9	-0.3
Rio de Janeiro	20.0	17.9	-2.1
São Paulo	9.3	8.2	-1.2
Sul	14.6	14.2	-0.4
Nordeste	13.0	14.4	+1.4
Centro Oeste	10.0	11.1	+1.1
Mg	23.9	23.3	-0.6
Norte	7.0	7.1	0.0

Recommendations

- **Prioritize salience recovery.** The clearest performance issue is declining salience alongside weaker recent consumption. Focus brand activity on staying mentally available in everyday purchase occasions.
- **Rebuild social/cultural brand cues.** Reinforce associations where Brahma softened, especially **Brazilian identity, sharing, fun, and beer-enthusiast appeal.**
- **Defend recent usage, not just trial.** Since trial stayed high while recent consumption fell, target frequency and repeat through activation around regular drinking occasions and loyalty/repeat-driving programs.
- **Concentrate effort geographically.** Put extra support behind **Rio de Janeiro** and **São Paulo**, where power declines were more pronounced, while protecting momentum in **Nordeste**.
- **Track first-choice and non-consideration closely.** The drop in “first choice” and rise in “would not consider” are early warning signs that should be monitored in the next wave.
- **Benchmark more directly against Heineken.** Brahma remains strong, but Heineken leads on power and 4-week usage; future plans should test what is driving Heineken’s stronger conversion and frequency.

Confidence

0.75. Confidence is fairly high because the evidence clearly establishes the headline result, the direction of core KPIs, recent usage trends, and some competitive and segment context. Confidence is not higher because the data does not prove causality, several explanatory gaps remain partial, and no significance testing is available to separate real movement from possible noise in smaller cuts.

Remaining Unknowns

- The data does **not conclusively prove why** Brahma underperformed in Q1 2026; the most likely explanation is lower salience and weaker recent usage, but direct causality is not established.
- Competitive context is only **partially** covered: the evidence shows relative standing on power, salience, and 4-week usage, but not a full diagnostic of why competitors outperformed.
- Segment-level findings are directional only; some cohort cuts have missing values, and granular movements may be unstable.
- No statistical significance or sample-size information is provided, so small changes—especially in imagery and cohort data—should be treated cautiously.

Confidence: 0.75
